On your marks...Get set...

The 2012 Olympics has inspired the North of England Beekeepers' Convention to discover how to make our bees simply the best. Our guest speakers are the country's top academic apiculturalist, a beekeeper with three generations of experience in the family, a researcher into why we become beekeepers and an expert into how a bee's brain works. So we're all set to go for gold – the sticky kind. This friendly event is organised by beekeepers from Northumberland, Newcastle, Durham and Cleveland. Local associations and sponsors have helped to support us financially, so here's a great opportunity to make the most of that generosity by coming to the Convention in person. In recognition of the financial climate we have kept the price the same as last year's – a bargain!

Whether you're a beginner or a seasoned beekeeper, this year's programme should give everyone new ideas and knowledge and set us up for a record breaking season. Beat the winter blues and send off that form now...**Go!**

	Professor Francis Ratnieks - The UK's only Professor of Apiculture and Head of the Laboratory of Apiculture and Social Insects at Sussex University. Working worldwide and backed by politicians and business, he describes cutting edge research and his £2million Sussex Plan.
	Dr Geraldine Wright - Principle Investigator at the Honeybee Lab in Newcastle University. Revelations about her current research into how bees learn and remember which flowers give them – and us - the best reward. Food!
	Tony Jefferson - Vice Chairman of Yorkshire Beekeepers. He hates the concept of queen rearing and prefers to think of raising colonies. His talk covers bee breeding - when, how and what's needed for the healthiest bees. Includes a demonstration with his triple breeder hive.
	Dr Karen Scott - Newcastle University. An update on research into the trials and tribulations of beekeepers in the Orkneys and North East. Why do we start, what keeps us going and what makes us give up?
